Level 3 Tennis Coach
LTA
2017

Education

Millfield School
2009-2010
AS levels

Millfield School
2007 - 2009
GCSE's

Full Stack Developer

I am currently training as a software developer at the IO Academy in Bath. I picked up programming in lockdown and enjoy constantly learning new skills and the satisfaction of building your own project! As a proud Cornishman, you'll likely find me on/near a beach or playing any sport possible.

Job History

IO Academy   **Jan 2024 - Present**
Full-Stack-Track   Bath
🔗 https://io-academy.uk/courses/full-stack-track

16 week Bootcamp covering HTML, CSS, Javascript, PHP, AJAX, React, Bootstrap, MySQL, SASS, OOP, RESTful API's, Slim, Agile, Git,

Rocket Padel   **Sept 2023 - Jan 2024**
Lead Coach   Bristol

Managed a small team of coaches at the UK's largest Padel centre. Led on the planning and delivery of the clubs sessions and activities and so regular communication with team members, clients and stakeholders was key throughout. I helped grow club memberships by 150% in the first 3 months of my time here and organised a successful club league with over 100 players involved.

Jan 2023 - Sept 2023
Took 9 months away to backpack around South-East Asia and New Zealand

Millfield School   **Jan 2018 - Dec 2022**
Senior Performance Tennis Coach   Street

Worked in a large sports team at one of the biggest sports schools in the UK. My role was helping players manage a hectic boarding life alongside a complete tennis schedule and this often required regular communication with parents and teachers. My biggest achievements were leading the tennis team to their first National Title in over 10 years and coaching 2 players competing at Junior Wimbledon.

ATP Tour   **2009 - 2018**
Professional Tennis Player

Projects

Food Delivery React App:
Working as an agile team, our task was to build a mock food delivery app using React and Bootstrap. The app had to work with existing data from an API and be able to view all restaurants, orders, and be able to add/remove orders from a basket.

PHP Music App:
For this task, we used PHP and MySQL for managing the back-end of a music app. We had to create a system for displaying artists, albums and songs from a database to work with an existing front-end and the user could also have the ability to track song counts, popular albums, recently played songs etc.
